

ADJUSTABLE TELEVISION STAND

Abstract of the Disclosure

[0040] An adjustable stand including at least one support and at least one adjustable bracket engaged with and adjustable along the support. The adjustable bracket includes a recess in a surface adjacent the support and at least one protrusion extending from a surface of the recess. The adjustable stand also includes at least one mounting bracket including: (1) at least one retaining portion configured to interface with a device to be supported by the adjustable stand; and (2) at least one flange portion configured to engage with the recess and the protrusion.
